ATEP 305. Therapeutic Modalities (3, 2). 4 credits. Offered fall.
This course provides a thorough overview of tissue injury, inflammatory response, healing process and neurophysiology applied to musculoskeletal injuries. Theory, application and clinical decision-making processes using therapeutic modalities during rehabilitation will be emphasized. Documentation, purchasing and maintenance are also addressed. Prerequisite: ATEP 205 and admission to the clinical component of the athletic training curriculum.

ATEP 307. Acute Care of Injuries and Illnesses. 3 credits. Offered fall.
This course is designed for student athletic trainers to meet the educational competencies for national accreditation in the following areas: development of risk management/emergency action plans, primary assessment of athletic injuries, emergency care of athletic injuries, immediate care of spine injuries, prevention of injuries associated with the physically active, utilization of diagnostic tools and an overall understanding of protective equipment. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 350. Measurements and Testing in Athletic Training. 2 credits. Offered fall.
The purpose of this course is to introduce and develop proficiency with measurement techniques frequently used in athletic training. Students will learn clinical evaluation techniques such as manual muscle testing, goniometry, volumetric measurements and girth measurements. How these measures are used in research will also be presented. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 355. Infectious Disease Control. 1 credit. Offered spring.
Discussion includes theories of origins, statistics and characteristics of the causative pathogen, incubation, illness patterns, transmission, prevention and treatment of infectious and noninfectious disease. Emphasis is placed on STDS, HIV, Hepatitis and OSHA regulations. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 376. Pharmacology for Athletic Trainers. 2 credits. Offered fall.
This course is designed for students to understand knowledge, skills and values that an entry-level certified athletic trainer must possess in pharmacological applications, including awareness of the indications, contraindications, precautions and interactions of medications, and the governing regulations relevant to physically active individuals. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 377. General Medicine in Athletic Training. 2 credits. Offered spring.
This course is designed for students to understand knowledge, skills and values that an entry-level certified athletic trainer must possess in pharmacological applications, including awareness of the indications, contraindications, precautions and interactions of medications, and the governing regulations relevant to physically active individuals. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 378. Assessment Skills in Athletic Training. 1 credit. Offered spring.
The purpose of this course is to develop knowledge and assessment skills related to general medical conditions. In addition, this course will cover body composition, bone density and quality of life outcome measurement tools. Prerequisite: admission to clinical portion of athletic training education program. Corequisite: ATEP 377.

ATEP 392. Level II Practicum in Athletic Training. 3 credits. Offered fall.
This course focuses on clinical performance and application of didactic knowledge. Clinical rotations, clinical competencies, internships, case studies and professional journals are included in course content. Sport specific activities and clinical applications involving palpation and wound care are key components of this course. August preseason orientation and clinical participation required. Prerequisite: Admission to clinical component of athletic training curriculum.

ATEP 393. Level III Practicum in Athletic Training. 2 credits. Offered spring.
This course focuses on clinical performance and application of didactic knowledge. Clinical rotations, clinical competencies, internships, case studies and professional journals are included in course content. Sport specific activities and clinical applications involving manual muscle testing and equipment fitting are key components of this course. Prerequisite: ATEP 392.

ATEP 405. Rehabilitation in Athletic Training: Upper Extremity. 3 credits. Offered fall.
This course explains the rehabilitation process of upper-extremity muscular and joint injuries related to athletic activities. Additional topics include prevention of athletic injuries and aquatic rehabilitation. Prerequisite: ATEP 305.

ATEP 406. Organization and Administration in Athletic Training. 3 credits. Offered spring.
This course is an overview of managerial issues including legal concerns, OSHA guidelines, budgeting/purchasing and staffing. In addition, this course provides a variety of experiences culminating in the knowledge and skills needed to meet entry-level competencies set by the National Athletic Trainers’ Association. Prerequisite: Permission of the instructor.

ATEP 494. Level IV Practicum in Athletic Training. 2-3 credits. Offered fall.
This course focuses on clinical performance and application of didactic knowledge. Clinical rotations, clinical competencies, internships, case studies, and professional journal are included in course content. Sport specific activities and clinical applications involving orthopedic testing and emergency internal abdominal/chest evaluation are key components. Prerequisite: ATEP 393.

ATEP 495. Level V Practicum in Athletic Training. 2 credits. Offered spring.
This course focuses on clinical performance and application of didactic knowledge. Clinical rotations, clinical competencies, internships, case studies and professional journal are included in course content. Sport specific activities and clinical applications involving cranial nerve assessment and neurosurgical evaluation are key components of this course. Prerequisite: ATEP 494.

Biology
Department of Biology

GBIO 103. Contemporary Biology (3, 0). 3 credits.
An in-depth exploration of selected biological concepts connected to current, relevant topics and emphasizing an understanding of science as a way of obtaining knowledge. Not available for major or minor credit in biology or biotechnology. Formerly GSCI 103. Students may not receive credit for both GSCI 103 and GBIO 103.

*BIO 114. Organisms (3, 3). 4 credits. Offered fall and spring.
An exploration of how diverse life forms carry out fundamental processes that sustain life, including acquiring and using essential molecules, growing and reproducing, responding to environmental stimuli and maintaining a stable internal environment. Labs will introduce students to the scientific method in a series of investigative lab and field experiences.

In this course students will learn about variation within populations, the mechanisms of evolution, phylogeny and classification, population and community ecology, animal behavior and ecosystems dynamics. Labs will include investigations in laboratory and field settings. Prerequisite: Grades of “C-” or better in BIO 114.

BIO 201. Trelawny Learning Community Seminar I. 1 credit. Offered fall.
Introduction to the biology major and biological research for first-year students in the Trelawny Learning Community. In addition to lab/field work with faculty or graduate students for 2-3h per week, students attend a weekly seminar. Seminar includes research skill and team-building exercises, guest speakers, and case studies geared toward a career in science. Faculty and students interact with community members to provide perspectives on the major and research in a scientific network. Prerequisite: Membership in the Trelawny Learning Community. Corequisite: BIO 114.

BIO 202. Trelawny Learning Community Seminar II. 2 credits. Offered spring.
The second part of the research skills seminar for first-year students in the Trelawny Learning Community. Students will have already begun research projects during fall semester, and will continue their projects into spring semester while continuing to build research skills. Students will take part in community, campus, and social events and gain experience helping to run a research-based event. Prerequisite: BIO 201. Corequisite: BIO 124.

BIO 203/ISAT 165. Viral Discovery (0, 3). 1 credit. Offered fall.
This course is an exploratory laboratory experience, designed for incoming freshmen. In the course, the students will learn about the life cycle and ecology of viruses infecting bacteria. Soil samples will be collected, and techniques for isolation and purification of the viruses will be performed by the students. Isolated viruses will be visualized using electron microscopy. The genomic material will be isolated and prepared for nucleic acid sequencing.

BIO 204/ISAT 166. Viral Genome and Bioinformatics (0, 4). 2 credits. Offered spring.
This is a computer-based laboratory experience, designed for those students completing the Viral Discovery course. Students will learn how to identify genes in a viral genome, compare the predicted proteins with known
proteins in databases, describe the contents of the genome and note all the relevant information for publication. Students will also research the ecology of soil and the role played by bacteriophages in ecology and evolution. Prerequisite: BIO 203 or ISAT 165.

BIO 214. Cell and Molecular Biology (3, 3). 4 credits. Offered fall and spring. Students will explore the physiology, metabolism and reproductive biology of prokaryotic and eukaryotic cells. Topics will include the structure and function of macromolecules, theoretical and mechanistic aspects of metabolism, bioenergetics and signal transduction. Labs will include investigations that introduce students to various biochemical techniques. Credit may not be earned in both BIO 224 and BIO 220. Prerequisites: Grades of "C-" or better in BIO 114 and either CHEM 131 or CHEM 120.

BIO 222. Interdisciplinary Biology for Engineering and Physical Sciences (3, 0). 3 credits. Offered spring. Case studies and an issues-based approach will provide a framework to understand the science of biology, to stimulate critical thinking, and to appreciate the interdisciplinary nature of biological investigations. This interdisciplinary biology course is intended for students who have at least sophomore status and who are physical science, engineering or mathematics majors. This course is not available for credit toward the major or minor in biology or biotechnology. Prerequisites: MATH 231 or MATH 235.

BIO 224. Genetics and Development (3, 3). 4 credits. Offered fall and spring. The final course in the introductory series will explore how genetic information is utilized throughout the lifetime of the organism. Labs will make use of common model organisms highlighting the growing base of knowledge on the genetics and molecular biology of developmental processes. Credit may not be earned in both BIO 224 and BIO 230. Prerequisite: Grade of "C-" or better in BIO 214.

BIO 225. Introductory Topics in Biology (Variable). 1-4 credits. Offered fall and spring. Introductory studies in specific areas of biology. May be repeated for credit when course content changes.

*BIO 270. Human Physiology (3, 2). 4 credits. Offered fall, spring and summer. An introduction to basic physiological principles using humans as the primary organism. Physiological adaptations will be examined at the molecular through organismal levels. Intended for students in health-related fields and Cluster 3 of the General Education Program. Not available for biology or biotechnology major credit. Prerequisites or corequisites: CHEM 120 or CHEM 131 or equivalent, and MATH 220 or equivalent.

BIO 280. Allied Health Microbiology (2, 4). 4 credits. Offered fall, spring and summer. An introduction to the biology and significance of microorganisms. Emphasis will be placed on human- and health-related aspects of microbiology. Credit may not be earned in both BIO 280 and BIO 380. Not available for biology or biotechnology major credit. Prerequisite: CHEM 120, GSCI 101, GSCI 101 or equivalent.

BIO 290. Human Anatomy (3, 3). 4 credits. Offered fall, spring and summer. A study of the basic body plan is reinforced by studies of dissected human cadavers and computer simulations. Emphasis is on the major body structures and systems.

BIO 301. Introductory Neuroscience. 3 credits. Offered fall. This course will examine molecular control of neuronal function. Topics include the structure and function of neuronal excitability, chemical and contact-mediated neuronal communication, developing and regenerating nervous systems, sensation and perception, learning and memory formation, repair from neuronal damage, and the neuronal pathways of sensation and motor control. In the context of these subjects, we will review the neuronal alterations that cause some common brain diseases. Prerequisites: CHEM 131, and BIO 214 or ISAT 351.

BIO 305. Ornithology (1, 4). 3 credits. Offered spring. Introduction to avian biology with exercises in field identification. Prerequisite: BIO 124 or permission of instructor.

BIO 309. Marine and Freshwater Invertebrates (3, 0). 3 credits. Offered fall. This is a course on animal diversity, the goal of which is to provide an understanding and appreciation of diverse ways animals function, reproduce and interact with their environment. Invertebrate groups will be surveyed. How evolution has resulted in the great richness and diversity of life on earth today will be explored using the principles of adaptation and phylogenetic analysis. Prerequisite: BIO 124 or equivalent.

BIO 310. General Entomology (2, 4). 4 credits. Offered periodically. A laboratory and field study of insects. Morphology, physiology and behavioral aspects will be emphasized. Collection, identification and preservation of local insects by standard procedures will be part of the course. Prerequisite: BIO 124 or permission of instructor.

BIO 312. Animal Welfare (3, 0). 3 credits. Offered fall. An examination of the biological basis of animal welfare. Topics include the evolution of domestic animals, physiological and behavioral measurements of stress, welfare assessment and pain perception. Case studies examine the use of animals for companionship, food, medical research and entertainment. Prerequisite: BIO 124 or permission of the instructor.

BIO 316. Animal Development (3, 0). 3 credits. Offered fall. This course integrates cell and molecular biology and genetics to understand the processes and mechanisms underlying body plan formation and organ formation in vertebrate animals and insects. The course additionally covers the development of muscle, skeletal and nervous tissues, the postembryonic phenomena of growth, metamorphosis and regeneration, and the developmental basis of evolutionary changes in animal anatomy. Prerequisite: BIO 224.

BIO 318L. Animal Development Lab (0, 3). 1 credit. Offered fall. This course complements BIO 316 with hands-on laboratory experience. Emphasis will be on microscope study of chick and frog embryos to better understand embryonic processes and anatomy, learning the tools and techniques for manipulating live embryos, and designing and carrying out independent research projects using developmental biology techniques and reagents. Co- or prerequisite: BIO 316.

BIO 320. Comparative Anatomy of Vertebrates (2, 4). 4 credits. Offered spring. A study of the evolution of vertebrate organ systems that integrates structure, function and development. Prerequisite: BIO 124, BIO 290 or equivalent.

BIO 324. Human Genetics (3, 0). 3 credits. Offered fall. An intermediate genetics course with an emphasis on human biology. Topics include cytogenetics, pedigree analysis, quantitative traits, mutation, epigenetics, genomics and ethical issues raised by developing technologies. Prerequisite: BIO 224.

BIO/MATH 342. Mathematical Models in Biology. 3 credits. Offered spring. Introduction to dynamical models (discrete and continuous time) applied to biology. Tools of mathematical analysis from linear and nonlinear dynamics will be taught, including stability analysis of equilibria, as well as appropriate use of software packages. Emphasis will be on model development and interpretation in the context of applications, including effective written and oral presentation. Prerequisite: MATH 232 or MATH 235 or equivalent.

BIO 343. Immunology (3, 0). 3 credits. Offered spring. A study of the molecular and cellular basis of the immune system. Topics include the properties of antigens and immunoglobulins, the development and regulation of humoral and cell-mediated immunity, resistance and immunization to infectious diseases, allergies, and autoimmune and immunodeficiency disorders. Credit may not be earned in BIO 442 and BIO 542. Prerequisite: BIO 214 or permission of instructor.

BIO 343L. Immunology Laboratory (0, 4). 1 credit. Offered spring. This course will introduce students to the theory and application of many of the methods currently used in clinical and research immunology. Laboratory exercises will focus on methods for identifying, quantifying and assessing functional activities of immune cells and molecules. Students will gain experience using experimental animals and in animal cell culture techniques. Corequisite: BIO 442.

BIO 345. Animal Field Biology. 3 credits. Offered summer. The course is designed to use the nutritional and energetic relationships between plants and animals to lead into the evolutionary relationship of members of the different animal phyla. Field study and lab specimens will be used to develop understanding of the ecological relationships of humans and local animals, insects and plants. Prerequisites: BIO 114 or equivalent.

http://www.jmu.edu/catalog/12

Course Descriptions 319
BIO/GEOL 350. Invertebrate Paleontology (3, 2). 4 credits. Offered fall.

The evolution and ecological structure of the biosphere from the origin of life to the present, emphasizing the evolution and paleobiology of animal life as shown by the fossil record. Lectures discuss methods used to interpret the fossil record and cover topics such as phylogeny and systematics, functional morphology, biostatigraphy, paleoecology, evolution, and extinction. Laboratories focus on the major phyla that have populated the earth throughout the geologic record. Prerequisite: GEOL 230, BIO 114 or permission of the instructor.

BIO 353. Basic Ecology (3, 3). 4 credits. Offered fall.

Ecological principles are presented in a context which will aid pre-college teachers to understand the background science of the subject and apply it to instruction. Prerequisites: Course is open only to IIDS majors and biology or biotechnology majors enrolled in the secondary education licensure pre-professional program. GSCI 166 or equivalent.

BIO 354. Global Change and Life: Ecological and Biological Impacts of Climate Variability. 3 credits. Offered fall.

Global climate change is important to the distribution, diversity, health, and survival of organisms. The biota have changed through evolution in part as a response to selection pressures from these variations. Living things can also adjust to change through phenotypic flexibility. This course examines, in a seminar/discussion format, the potential ecological impacts of past and current patterns of climate alteration on organisms. Prerequisite: BIO 124 or equivalent.

BIO 360. Plant Biology (3, 0). 3 credits. Offered spring.

An introduction to the biology of plants including evolution, diversity, form and function, ecology and biotechnology. Prerequisites: BIO 124 and BIO 214.

BIO/CHM 361. Biochemistry I (3, 0). 3 credits. Offered fall.

An introduction to the molecules and chemical reactions of living systems. Structure and function of important classes of biomolecules are explored and the relationship of structure to function is stressed. Basic metabolic sequences are discussed. Prerequisites: CHM 241 and permission of instructor.

BIO 364. Human Uses of Plants (3, 0). 3 credits. Offered fall.

A survey of past, present and future uses of plants with emphasis on economically important plant families. Issues of cultivated plant origins, biodiversity and germplasm preservation are considered. Prerequisite: BIO 124 or permission of the instructor.

BIO 364L. Laboratory in Human Uses of Plants (0, 3). 1 credit. Offered fall.

An investigative examination of plants and their constituents with an emphasis on their physiological ecology, adaptations and economic utilization by humans. Prerequisite or corequisite: BIO 364.

BIO 366. Plants and Environment (3, 3). 4 credits. Offered spring.

Students will engage in a systematic investigation of plant structure and function. Ecological roles of plants and resource utilization by humans will be explored. Prerequisites: Course is open only to IIDS majors and biology or biotechnology majors enrolled in the secondary education licensure pre-professional program. GSCI 166E or equivalent.

BIO 370. Animal Physiology (3, 3). 4 credits. Offered fall and spring.

Design and function of cellular and organ physiology will be explored in both non-human and human animals. Class activities will emphasize problem-solving and collaborative and independent learning. The laboratories will utilize computer simulations and animal/human experiments to examine principles of both physiology and scientific investigation. Prerequisites: BIO 214 and CHEM 132 or permission of the instructor. One semester each of calculus and statistics are recommended.

BIO 380. General Microbiology (2, 4). 4 credits. Offered fall and spring.

A study of the structure and functional organization of microorganisms and their relationship to humans and to the environment. Credit may not be earned in both BIO 280 and BIO 380. Prerequisite: BIO 214 or permission of the instructor.

BIO 386. Field Botany (3, 3). 4 credits. Offered spring odd years.

An in-depth survey of vascular plants in the field with emphasis on identification, diversity of form and function, and ecology. Laboratory topics will include techniques for sampling plant communities, identifying local flora and preserving botanical materials. Prerequisite: BIO 124.

BIO/PSYC 395. Comparative Animal Behavior (3, 0). 3 credits.

This course covers aspects of the development, function and evolution of the behavior of nonhuman animals. Topics include intraspecies communication, feeding, aggression, territoriality, reproductive behavior and social behavior. Prerequisites: Psychology majors: PSYC 211 or PSYC 213; biology or biotechnology majors: BIO 114 and 124 and one of the following ("C-" or better): MATH 205, 220, 231, 235, 285, 318.

BIO/GEOL 400. Geology and Ecology of the Bahamas. 3 credits.

This course explores the geology and ecology of the shallow-water marine environment by examining the preeminent modern example, the Bahama platform. The Bahamas provide an excellent model for understanding modern and ancient carbonate and reef deposits and a variety of terrestrial/aquatic habitats. Biological processes are responsible for many of the geological features. This course consists of the study of the biology/ecology of marine organisms in addition to geological topics. Prerequisites: GEOL 110, GEOL 211 or a 200-level GEOL or BIO course; at least four hours of additional lab science, at least sophomore status, and permission of the instructor.

BIO 402. Forest Ecology. 4 credits. Offered fall.

A study of the function, structure, and composition of forested ecosystems. The effect of physical geography on the distribution of forest communities will be explored. Issues of forest management and restoration will also be considered. Field laboratory topics will include dendrology and sampling techniques within different forest successional stages. Prerequisite: BIO 124 or equivalent.

BIO 403. Animal Communication. 3 credits. Offered spring.

In this integrated lecture and lab course, students will develop an understanding of how and why animals communicate. This course will explore animal communication from diverse perspectives, including the physical nature, design features and evolution of signals, and will do so through in-depth examination of examples of communication systems. Prerequisites: BIO 124 and MATH 220, MATH 285 or MATH 318 or permission of the instructor.

BIO 404. Evolutionary Analysis (3, 0). 3 credits. Offered fall.

An examination of the place of theoretical thought in biology. The concepts of phylogenetic relationships and the mechanisms of organic change as expressed through the principles of organic evolution will be stressed. Prerequisite: BIO 224 or permission of the instructor.

BIO/GEOL 405. Vertebrate Paleontology (3, 1). 3 credits. Offered periodically.

A study of the origin and evolution of the vertebrates. Emphasis will be on understanding how the processes of Earth evolution and biological evolution have interacted through time to produce a coherent picture of vertebrate history. Prerequisite: GEOL 230, BIO 124 or permission of instructor.

BIO 410. Advanced Human Anatomy (1, 6). 3 credits. Offered spring.

An advanced study of topics in human anatomy using dissection techniques. Prerequisites: BIO 290 and/or BIO 320 and permission of instructor.

BIO 412. Mammalogy. 4 credits. Offered fall.

An introduction to the study of mammals, incorporating evolutionary history, general physiology, reproductive biology, systematics, ecology, wildlife management and behavior, followed by a review of mammalian taxonomic orders. Lecture is reinforced with laboratory and field experience. Completion of BIO 320 recommended. Prerequisite: BIO 124 or equivalent.

BIO 414. Clinical Anatomy for Occupational Therapists. 4 credits. Offered fall.

This course offers an in-depth study of the structure of the musculoskeletal and peripheral nervous systems of the human body. Specific structural and neural pathologies will be examined in regards to impact on occupational performance. Laboratory experiences involving cadaver dissection, skeletal material, models and audiovisual technology will be utilized. Prerequisite: Admission to the Occupational Therapy program.

BIO 416. Human Embryology (3, 3). 4 credits. Offered spring.

An introduction to human development. Topics include the molecular and cellular processes of gametogenesis, fertilization, gastrulation and organogenesis, as well as the macroscopic changes that occur from conception to birth. This course will provide a basis for understanding congenital malformations, cloning and stem cell research. Prerequisite: BIO 224 or BIO 290.

BIO 420. Medical Parasitology (3, 0). 3 credits. Offered fall.

The study and medical implications of parasites that infect humans. Class activities will emphasize parasite morphology, modes of transmission, mechanisms of host entry and infection, niche selection, life cycles, pathogenesis, diagnosis, and treatment and control. Prerequisite: BIO 214 or permission of instructor.

BIO 420L. Medical Parasitology Lab (0, 3). 1 credit. Offered fall.

This course will introduce students to the techniques and procedures currently used in clinical and research parasitology. Laboratory exercises will focus on diagnostic methods and the use of animal models that illustrate parasitic life cycles, including their infectious stages and modes of transmission. Corequisite or prerequisite: BIO 420.

http://www.jmu.edu/catalog/12
BIO 426. Topics in Biology. 1-4 credits. Offered periodically.
Studies in specified areas of biology. May be repeated for credit when course content changes. Prerequisite: See MyMadison for prerequisites for specific topics.

BIO 427. Topics in Biologic with Laboratory. 1-4 credits. Offered periodically.
Laboratory studies in special areas of biology to accompany BIO 426 or stand alone. May be repeated for credit when course content changes. Prerequisite: See MyMadison for prerequisites for specific topics.

BIO 432. Light Microscopy (2, 4). 4 credits.
This course covers the principles behind light microscopy, from the properties of light to the latest technologies in microscopy. Students will get hands-on experience with the different kinds of microscopes, including the confocal microscope. The course also covers fluorescent probes, advanced fluorescence techniques, digital imaging, methods of quantification and figure preparation for publication, with an emphasis on biological applications. Prerequisite: BIO 222 or BIO 224.

BIO 440. Functional Neuroscience for Occupational Therapists. 3 credits. Offered fall.
This course will examine functional performance of all aspects of the human nervous system. Specific nervous system conditions will be introduced and their impact on occupational performance, performance components and environmental contexts discussed. Prerequisite: Admission to the Occupational Therapy program.

BIO 444. Virology (3, 0). 3 credits. Offered fall.
A study of the fundamental aspects of both basic and medical virology. Credit may not be earned in both BIO 444 and BIO 544. Prerequisites: BIO 214 and BIO 224 or permission of instructor.

Molecular, cellular and network mechanisms underlying behavior will be studied using problem-solving, discussion, lecture and critical reading of the primary literature. Similalries and differences between nervous systems and computers will be explored. Laboratories will utilize contemporary electrophysiology and computer simulation to examine the neurobiology of simple animal model systems. Prerequisite: BIO 214.

BIO 448. Medical Microbiology (3, 3). 4 credits. Offered spring.
This class focuses on microorganisms of medical importance, mainly bacteria and viruses. Lecture follows an organism-by-organism approach. Key topics for each organism include general cell structure, unique structures/functions, epidemiology of the disease that the organism causes, mechanisms of pathogenesis, isolation and identification of the organism, and treatment options. Prerequisite: BIO 380.

BIO 450. Evolutionary and Societal Impacts of Developmental Biology (3, 0). 3 credits. Offered spring.
Discussion-based course on topical issues in developmental biology and how they impact animal evolution, bioethics, human identity and environmental science. Prerequisite: BIO 224.

Ecological systems are examined as basic ecological units which are comprised of communities interacting with their environments and are themselves components of landscape. Credit may not be earned in both BIO 451 and 551. Prerequisites: BIO 124 and BIO 214.

Theoretical and applied aspects of distribution and abundance, population regulation, interactions between populations and conservation will be studied in selected organisms, including humans. Credit may not be earned in both BIO 452 and BIO 552. Prerequisite: BIO 124.

BIO 453. Microbial Ecology and Evolution (2, 4). 3 credits. Offered spring.
The ecology of microorganisms will be covered, including those important in human health and in natural environments. Emphasis will be placed on the study and critique of scientific literature. Credit may not be earned in both BIO 453 and 553. Prerequisites: BIO 124, and BIO 280 or BIO 380.

BIO 454/MATH 354. Introduction to Biometrics (3, 1). 4 credits. Offered spring.
This course discusses the role of statistics in biological research and interpretation of biological phenomena. The course will cover topics of sampling, correlation, regression analysis, tests of hypotheses, commonly observed distributions in natural populations, nonparametric tests, goodness-of-fit tests and ANOVA. In order to fully comprehend the statistical analysis of those publications, students will review approximately half a dozen publications from different fields of biology. Prerequisite: MATH 220 or equivalent.

BIO 455. Plant Physiology (3, 3). 4 credits. Offered spring odd years.
Function and structure of plants including water relations, mineral nutrition, transport phenomena, metabolism, growth and development, and selected topics in physiological ecology. Credit may not be earned in both BIO 455 and BIO 555. Prerequisite: CHEM 241 or CHEM 342.

The functional and descriptive study of the interaction of the mosaic of ecosystems that comprise the landscape prevalent in a region. Prerequisite: BIO 124.

This course will explore the various ways that geographic information systems (GIS) can be used to answer biological questions. Students will use GIS software to study applications in ecology, conservation biology and environmental biology. No prior GIS experience is required. Prerequisites: BIO 124 or permission of the instructor.

BIO 459. Freshwater Ecology (2, 4). 4 credits. Offered fall.
Functional relationships and productivity of freshwater communities are examined as they are affected by their physical, chemical and biotic environment. Organisms inhabiting lakes, ponds, rivers, streams and estuaries are studied at the population, community and ecosystem levels. Credit may not be earned in both BIO 459 and BIO 559. Prerequisites: BIO 124, CHEM 131 and CHEM 132.

BIO 460. Plant Cell and Tissue Culture (2, 4). 4 credits. Offered spring even years.
Theory and practice of growing isolated plant cells, tissues and organs. Credit may not be earned in both BIO 460 and BIO 560. Prerequisites: BIO 114 and CHEM 132.

BIO 465. Environmental Toxicology (3, 3). 4 credits. Offered spring.
The study of types, sources and biological effects of environmental pollutants. Class activities will include discussions of foundational material covering the biological effects of a broad range of pollutants. Labs will focus on the use of simulation models, geographic information systems and other software currently used in environmental toxicology for the analysis of environmental data. Credit may not be earned in both BIO 465 and BIO 565. Prerequisite: BIO 224 or equivalent.

BIO 466. Toxicology Seminar (3, 0). 3 credits. Offered fall.
Readings and discussions of the primary scientific literature with a focus on the biological effects of toxins at the genetic, cellular, physiological and ecological level. Prerequisite: BIO 224 or equivalent.

BIO 470. Morphology of Nonvascular Plants (2, 4). 4 credits. Offered fall odd years.
Comparative morphology, ecology and taxonomy of representative algae, fungi and bryophytes. Credit may not be earned in both BIO 470 and BIO 570. Prerequisite: BIO 124.

BIO 472. Human Metabolism (3, 0). 3 credits. Offered spring.
This course will focus on the cellular physiological mechanisms responsible for regulation of normal human metabolism and place them in the context of the development of chronic disease processes. Prerequisites: CHEM 341 and BIO 214 or permission of the instructor.

BIO 475. Advanced Cell Biology (3, 3). 3 credits. Offered spring.
This seminar-style course covers topics in advanced cell and molecular biology. Class format will be discussions from assigned review articles, followed by student-led presentations of assigned primary literature. Students write a research grant proposal and give an oral presentation of their proposal in class. Prerequisite: BIO 224.

BIO 480. Advanced Molecular Biology (3, 4). 4 credits. Offered fall and spring.
Cellular constituents and genetics are emphasized at the molecular level. Credit may not be earned in both BIO 480 and BIO 580. Prerequisite: BIO 224, and CHEM 241 or CHEM 342.

BIO 481. Genomics (3, 3). 4 credits. Offered spring.
An advanced biology course designed for students to learn about the structure and function of genomes, to develop facility in web-based tools and resources, and to appreciate the power and limitations of current resources and knowledge. Focus is on the biological questions that genomics can help to answer. Laboratory exercises will be sequencing and analyzing genomic DNA. Prerequisite: BIO 224.

BIO 482. Human Genetics (3, 4). 3 credits. Offered fall.
Microscopic structure of cells, tissues and major organ systems of the body. Basic anatomical and physiological function is presented to emphasize the histological significance of the examined organ systems. Prerequisite: BIO 270, BIO 290 or equivalent.
BIO 486. Systematics of Vascular Plants (2, 4). 4 credits. Offered spring even years. Study of systematic theory and an overview of the classification and evolution of higher plants with particular attention to flowering plant families. Techniques for plant identification and collection and for construction of phylogenies will be taught in lab. Prerequisite: BIO 124 or permission of the instructor.

BIO 490. Biomechanics (3, 3). 4 credits. Offered spring. A study of the interactions of organisms with their physical environment. Concepts from fluid and solid mechanics are applied to biological form and function. Prerequisite: BIO 114 or permission of the instructor.

BIO 492. Teaching in Biology (0, 4). 1 credit. Offered fall and spring. Students are trained for and participate in teaching undergraduate biology laboratories. Students must contact and make arrangements with the supervising instructor in the term prior to registration. May be repeated for a maximum of two credits when course content changes. Prerequisites: GPA of 2.5 or higher and permission of the instructor.

BIO 493. Pre-Veterinary Student Internship (0, 7). 2 credits. Offered fall and spring. Students are supervised by veterinarians and lab technicians in diagnostic lab activities at a regional animal health laboratory. A proposal and final presentation are required. Enrollment is limited to 1-2 individuals per term and students are advised to contact the Pre-Veterinary coordinator to be waitlisted. Prerequisites: Completion of BIO 224, GPA of 2.5 or higher and permission of the instructor.

BIO 494. Internship in Biology (0-12). 6 credits. Students participate in research or applied biology outside of this university. A proposal must be approved prior to registration, and a final paper will be completed. Prerequisites: Biology or biotechnology major with a minimum of eight biology credit hours and a GPA of 2.5 or greater.

BIO 495. Biotechniques (0, 4). 1 credit. Offered fall and spring. Students are trained in research theory and techniques. Students must contact and make arrangements with a supervising instructor in the term prior to registration. May be repeated for a maximum of two credits when course content changes. Prerequisite: GPA of 2.5 or greater.

BIO 496. Research Literature (0, 4). 1 credit. Offered fall and spring. Students pursue literature research in a selected area of biology. Students must contact and make arrangements with a supervising instructor in the term prior to registration. May be repeated for a maximum of 2 credits when course content changes. Prerequisite: GPA of 2.5 or greater.

BIO 497. Biological Research (0, 4-8). 1-2 credits. Offered fall and spring. Students pursue a lab or field research project in a selected area of biology. Students must contact and make arrangements with a supervising instructor in the term prior to registration and complete a 2-3 page proposal no later than five weeks after the start of the course. Course may be repeated. Prerequisite: GPA of 2.5 or greater.

BIO 499. Senior Project (0, 8). 2 credits. Offered fall and spring. Three semester courses taken as Parts A, B and C; 2 credits each. Expectations, requirements and prerequisites are defined in the department senior project policy. Students must contact and make arrangements with a supervising instructor in the term prior to registration.

BIO 597. Internship in Biology (0-12). 6 credits. Students participate in research or applied biology outside of this university. A proposal must be approved prior to registration, and a final paper will be completed. Prerequisites: Biology or biotechnology major with a minimum of eight biology credit hours and a GPA of 2.5 or greater.

BSAN/CIS 364. Decision Support Systems. 3 credits. Offered as needed. This course provides students with an understanding of computer-based information systems, which enhance the decision making capabilities of managers. Students will learn to extend the capabilities of Microsoft Office using Visual Basic for Applications and build decision support systems. Prerequisites: COB 291 or equivalent and junior or senior standing.

BSAN 391. Quantitative Business Modeling. 3 credits. Offered as needed. This course addresses a wide range of complex business problems through quantitative modeling and appropriate computer applications, especially spreadsheets. Approaches include optimization and sensitivity analysis, multi-objective decision making and risk analysis. Prerequisites: COB 291 or equivalent and junior or senior standing.

BSAN 393. Predictive Analytics and Data Mining. 3 credits. Offered as needed. This course focuses on quantitative techniques and computer applications that allow the extraction of useful, previously unrecognized information from large data sets for predictive purposes. By effectively sifting through databases such as those generated by many businesses, data mining allows the analyst to recognize potentially important patterns and to target business opportunities. Prerequisites: COB 291 or equivalent and junior or senior standing.

BSAN/CIS 490. Special Studies in Computer Information Systems or Business Analytics. 3 credits. Offered as needed. An advanced course in information and/or business analytics designed to give qualified students an opportunity to complete independent study under faculty supervision. Prerequisites: Senior standing, recommendation of the instructor and written approval of the department head prior to registration.

BSAN 498. Special Topics in Business Analytics. 3 credits. Offered as needed. An advanced course designed to allow exploration of current topics in business analytics. Course content will vary. See adviser for current content. Prerequisite: Permission of the instructor.

Business Law

College of Business

BLAW 314. Real Estate Law. 3 credits. A study of the principles of law-governing interests in real estate including acquisition, encumbrance, transfer, rights and obligations of parties, and state and federal regulations thereof. Prerequisites: COB 218 and junior standing.

BLAW 470. Financial Products: Regulation and Protection. 3 credits. An inquiry into the legal environment of the financial marketplace. Topics explored include the role of regulatory agencies, the design of contracts which minimize credit risk and maximize marketability, and methods of protecting the proprietary component of innovative financial products. Prerequisites: COB 218 and junior standing.

BLAW 494. White Collar Crime. 3 credits. A study of white collar crime in America, a unique type of criminal activity that primarily affects businesses. The course explores the substance of white collar crime and focuses on the unique elements of various crimes through the study of actual cases. The course also examines how white collar crimes are prosecuted and defended in state and federal courts. Students are introduced to federal and state criminal procedure, substantive defenses, and the use of sentencing guidelines. Prerequisite: COB 300.

BLAW 495. Contract Law, Sales and Secured Transactions. 3 credits. Offered fall and spring. A study of the law of contracts, Article Two of the Uniform Commercial Code, product liability, legal liability of accountants, secured transactions and bankruptcy with emphasis on the role these play in professional and personal decision making. The courts, the legislature and the interaction of these two branches of government in responding to a changing society are studies throughout. Prerequisites: COB 218 and COB 300.

BLAW 496. The Law of Business Organizations, Negotiable Property Instruments and Property. 3 credits. Offered fall and spring. A study of Article Three of the Uniform Commercial Code, agency, partnerships, corporations, securities regulations, real property, trusts and decedents estates with emphasis on the role these play in professional and personal decision making. Prerequisites: COB 218 and COB 300 or permission of instructor.

BLAW 497. Legal Aspects of International Business. 3 credits. Offered fall. Survey of legal implications of international business dealings including foreign direct sales, distributorship arrangements, licensing of technology and

http://www.jmu.edu/catalog/12
legal aspects of the multi-national corporation. The formal legal environment, relevant conventions and trade regulations, and the transnational reach of regulatory law will be considered. Prerequisites: COB 218 and senior standing.

BLAW 498. Special Topics in Business Law. 3 credits.
This course is designed to allow explorations of areas of current topics in business law. Course content will vary by semester and instructor. For current content, consult the advisor. Prerequisites: COB 300 and permission of the instructor.

Business and Marketing Education
College of Education

BMED 200. Introduction to Business and Marketing Education. 3 credits.
A general survey of business and marketing principles as they relate to preparation for teaching with emphasis on the history of business and marketing in America, the basic forms of business organizations, ownership, finance, management, taxes and wages, and labor relations.

BMED 230. Document Design and Production. 3 credits.
Experience in planning, designing and producing documents for the business office with focus on transferability of productivity among the genre of word processing software. Prerequisite: Keyboard in excess of 40 words per minute with at least 95 percent word accuracy without visual reference to the keyboard.

BMED 300. Data and Records Management. 3 credits.
Develops skills in managing the information of business by organizing data through the creation and use of computer spreadsheets and databases. Includes the management and organization of hard records.

BMED 376. Occupational Experience in Business. 3 credits.
Supervised internship providing business office experience for students seeking licensure as business education teachers in middle and secondary schools. A credit/no credit grade will be assigned. Prerequisite: Permission of the instructor.

BMED 377. Occupational Experience in Marketing. 3 credits.
Supervised internship providing marketing (retail, promotion, entertainment, merchandising, etc.) experience for students seeking licensure as marketing education teachers in middle and secondary schools. A credit/no credit grade will be assigned. Prerequisite: Permission of the instructor.

BMED 380. Demonstration Methods for Business and Marketing. 3 credits.
Development of an instructional model incorporating demonstrations and supervised walk-throughs in planning and directing the learning of computer-related and other complex business and marketing procedures and processes.

BMED 400. Business and Marketing Communications. 3 credits.
Develops skills in communicating effectively through formal and informal business reports, letters and memorandums. Emphasis on realistic problem solving involving collecting, organizing, analyzing, interpreting and presenting data. Prerequisites: GWWRIT 101, GWWRIT 102 and BMED 230 or equivalent.

BMED 430. Desktop Publishing Design and Production. 3 credits.
Experience in planning, designing and producing the publications of business and education with focus on transferability of functions among the genre of desktop publishing software.

BMED 490. Independent Study in Business and Marketing Education. 1-3 credits. Offered fall and spring.
Provides opportunity to complete independent study or research on problems in business and marketing education. Prerequisite: Permission of the program coordinator.

Chemistry
Department of Chemistry and Biochemistry

CHEM 100. Chemistry Today. 3 credits.
Provides the background necessary to understand how chemistry affects our daily lives. An enriched overview of the fundamental principles of chemistry is followed by applications to topics of current interest. A high school science background is assumed. Not available for major or minor credit in chemistry.

*CHEM 120. Concepts of Chemistry. 3 credits. Offered fall and spring.
A one-semester introduction to the fundamental principles, laws and applications of chemistry. Examples relating to the health sciences are emphasized. Not available for major or minor credit in chemistry.

CHEM 120L Concepts of Chemistry Laboratory. 1 credit. Offered fall and spring.
A one-semester introduction to laboratory work which illustrates the fundamental principles, laws and applications of chemistry discussed in CHEM 120. Experiments relating to the health sciences are emphasized. Prerequisite or corequisite: CHEM 120.

*CHEM 131. General Chemistry I. 3 credits. Offered fall and spring.
The first of a two-course general chemistry sequence for science majors. It is designed to introduce students to basic chemical concepts including atomic structure, periodic properties of the elements, nomenclature, basic stoichiometry, theories related to reactivity and bonding, and the behavior of materials. The laboratory and lecture portions of CHEM 131 must be taken concurrently. Chemistry majors take 135L rather than 131L.

CHEM 132. General Chemistry II. 3 credits. Offered fall and spring.
A course designed to examine the mechanisms by which chemists obtain information about reacting systems. Major concepts covered include: chemical reactivity, chemical equilibrium, electrochemistry, thermodynamics and kinetics. Prerequisites: Grades of “C-” or higher in CHEM 131 and either CHEM 131L or CHEM 135L. Corequisite: CHEM 132L or 138L (chemistry majors take 138L).

CHEM 131L*-132L. General Chemistry Laboratories. 1 credit each semester. Offered fall and spring.
These laboratory courses are designed to complement and supplement the CHEM 131-132 lecture courses. The laboratory and lecture portions must be taken concurrently. Chemistry majors are to take CHEM 135L and 138L. Prerequisites for CHEM 132L: Grades of “C-” or higher in CHEM 131 and either CHEM 131L or CHEM 135L.

CHEM 135L. Special General Chemistry Laboratory. 1 credit. Offered fall.
An enriched laboratory course designed primarily for chemistry majors. Corequisite: CHEM 131.

CHEM 138L. Special General Chemistry Laboratory. 2 credits. Offered spring.
An enriched laboratory course that includes special topics and experiments not presented in the regular CHEM 132 laboratory. Prerequisites: Grades of “C-” or higher in CHEM 131 and either CHEM 131L or 135L. Corequisite or prerequisite: CHEM 132.

The major objective for this course is to teach the modern method of scientific problem solving using organic compounds as models. Emphasis will be on the chemical language (nomenclature and terminology), molecular electronic concepts, theories of organic reactions, stereochemistry and structure elucidation of organic compounds. Prerequisite: Grade of “C-” or higher in CHEM 132.

CHEM 241L. Concepts of Organic Chemistry Laboratory. 1 credit. Offered fall.
Laboratory work will include training in the techniques of organic chemistry, preparation of compounds and some organic qualitative analysis. Prerequisite or Corequisite: CHEM 241.

The major objective for this course is to teach the modern method of scientific problem solving using organic compounds as models. Emphasis will be on the chemical language (nomenclature and terminology), molecular electronic concepts, theories of organic reactions, stereochemistry and structure elucidation of organic compounds. Prerequisite: Completion of CHEM 241 with a grade of “C-” or higher.

CHEM 242L. Organic Chemistry Laboratory. 2 credits. Offered spring.
This course will present laboratory techniques and experiments associated with organic chemistry, including an introduction to synthesis, spectroscopic methods, chromatographic techniques and some qualitative organic analysis. Corequisite: CHEM 242. Prerequisites: A grade of “C-” or higher in CHEM 241.

CHEM 260. Concepts of Biochemistry. 3 credits. Offered spring.
A brief survey of the principal constituents of living cells, proteins, carbohydrates, lipids and nucleic acids, with emphasis on their synthesis and transformations in vivo. Intermediary metabolism and protein replication will be stressed. (The laboratory and lecture portions must be taken concurrently; not available for major credit.) Credit may not be earned in both BIO 220 and CHEM 260. Prerequisite: CHEM 241 and CHEM 241L.

CHEM 260L. Concepts of Biochemistry Laboratory. 1 credit. Offered spring.
The laboratory work will comprise experiments demonstrating some of the pertinent reactions including those of analytical value. Corequisites: CHEM 260. Prerequisites: CHEM 260.
