The *Journal of Conventional Weapons Destruction* seeks mine action and conventional weapons destruction experts to serve as peer reviewers for its Research and Development (R&D) section. Each issue of *The Journal*, published three times a year, typically contains one to three R&D articles. View published R&D articles online at: jmu.edu/cisr/journal/current.shtml

PROCESS: *Journal* editors contact three reviewers with expertise in topics addressed in a potential R&D article. Two of the three reviewers must approve each article considered for the R&D section. Individual reviews are conducted via email, and results remain anonymous.

Reviewers comment on articles and make recommendations as needed. Ultimately, reviewers approve the article for publication, suggest revisions before publication or reject the article for publication. Constructive feedback is passed on anonymously to authors.

Reviewers are typically given three weeks to complete their reviews. R&D submissions are normally between 2,000 and 4,000 words.

CONFLICT OF INTEREST: When contacted to review an article, reviewers are responsible for disclosing any conflicts of interest they may have with an article's subject, content or authors. Potential conflicts of interest may include having worked on the development of the technology being discussed or having worked on a competitive technology.

RECOGNITION: Reviewers receive recognition for their service on the inside front cover of *The Journal*. We are not able to offer financial compensation at this time.

BECOME A REVIEWER: If you are interested in being a peer reviewer for *The Journal*, email cisr-journal@jmu.edu and specify your area(s) of expertise. Please also include a CV or brief biographical statement.
