Pathways to Resilience Workshop Promotes Leadership and Peer Support

Pathways to Resilience (P2R) created a unique leadership program to help landmine survivors promote resilience and create secure collegial relationships. This article provides background regarding the curriculum and training activities and recounts how P2R helped survivors experience post-traumatic growth after tragedy.

by Anne Stewart, Ph.D., and Lennie Echterling, Ph.D., JMU Dept. of Psychology, Cameron Macauley, MPH, and Nicole Neitzey, JMU Center for International Stabilization and Recovery, and Hasan Hamdan, Ph.D., JMU Dept. of Mathematics and Statistics

A young woman flashed a bright smile and gracefully performed a traditional dance. The other women in the room responded with delight and encouragement.

A man announced to the people gathered that he had gone to town to purchase short-sleeved shirts to wear. His pronouncement was welcomed with spontaneous, heartfelt applause.

His declaration was met with a smile and graceful performance. An accomplished country leader proudly introduced his younger colleague to conduct the final presentation. Each graciously acknowledged the support they have offered each other in troubled times.

The events, however, actually constitute remarkable milestones for participants attending this innovative workshop. The dance was the first the young woman had performed since a landmine explosion injured her while dancing at a relative’s wedding. The man had not worn short sleeves since a mine injury resulted in the loss of his forearm. The junior colleague, a landmine-injury survivor, delivered his inaugural professional presentation.

Pathways to Resilience is an inventive regional training program developed and implemented under the sponsorship of the Office of Weapons Removal and Abatement in the U.S. Department of State’s Bureau of Political-Military Affairs (PM/WRA), and through partnership with the Lebanon Mine Action Center. The project was the vision of Kamel Sa’adi, a Jordanian landmine survivor who established a nongovernmental organization, Lifeline for Consultancy and Rehabilitation, to assist and support other survivors. Staff from the Center for International Stabilization and Recovery, Program Manager Nicole Neitzey and Peer-Support Specialist Cameron Macauley, coordinated P2R’s planning and implementation. Faculty from the Departments of Graduate Psychology and Mathematics and Statistics at James Madison University participated in the program to provide training, curriculum development, program evaluation, needs assessments and follow-up surveys.

The program took place in Beirut for landmine survivors from different landmine-contaminated regions of the Middle East, as well as representatives of organizations that assist these survivors. Twenty-nine participants from Iraq, Jordan, Lebanon and Yemen came to learn how to conduct peer-to-peer projects for survivors in their own countries. The intensive schedule included experiential learning, theater-based activities, role-playing activities, improvisations and other exercises designed to promote post-traumatic growth.

Within a culturally responsive framework, the leadership training addressed disability rights and laws, peer-to-peer support, post-traumatic growth and program-development skills for landmine survivors.

Disability Rights and Laws

Work with survivors of landmine injuries requires a human-rights perspective. Persons with injuries from war-related violence are not incompetent individuals requiring charity. Rather, they are persons entitled to full participation and inclusion in society. Participants were provided an overview of the historical and current context of the United Nations’ Convention on the Rights of Persons with Disabilities, and other relevant regional and global initiatives, including the Cluster Munitions Coalition and the meeting of States Parties to the Convention of Cluster Munitions in Beirut (September 2011). The presenter discussed the definition of terms, the status of states as signatories or ratifiers, as well as the role of the CRPD in calling for nondiscrimination and access for persons with disabilities. The workshop participants discussed the importance of recognizing persons with disabilities as a valuable part of human diversity.

Peer-to-peer Support

Consistent with the workshop’s experiential and collaborative approach, the format of the peer-to-peer support training included presentations, group discussions and practice sessions. The training activities were grounded in key theoretical literature in transformative and experiential learning in which the learning process begins with a concrete experience and is followed by reflective observation, conceptualization and active experimentation.

The workshop participants began identifying actions they considered helpful ( pitying, ignoring, doing too many things for the survivor) as they healed from their injury. This identification led to a discussion of the use of peer-to-peer support as a natural process where survivors of a traumatic experience are ideal resources for helping other survivors. Participants explored what defines a peer, discussing the relevance of comparable experiences, injuries, gender and age for successful peer-to-peer support. The participants concluded that similarity is only part of the equation, and what is most important is the relationship between peer-support worker and survivor.

Participants were introduced to peer-to-peer support worker skills, such as listening, understanding and validating the survivor’s story, along with looking for strengths of the survivor and resources available. The participants engaged in role-playing practice in small groups with facilitators to develop these skills.

Based on resilience and attachment theories, the participants practiced asking Getting Through questions, such as “Who was especially helpful in supporting you to do that?” or “What did you draw from inside yourself to make it through that?” They also practiced asking Making Meaning questions, such as “As you make more sense of this, what have you learned so far?” or “What advice would you give somebody else?” Participants learned ways to effectively use and combine individual and group formats of peer-to-peer work. The curriculum also examined funding challenges and how to manage peer-to-peer programs.

Post-traumatic Growth

Traditional trauma perspectives have focused on the deficits and disorders of survivors. However, recent research findings on resilience and attachment have exciting implications.
for mine-action programs. While acknowledging a trauma’s impact, the P2R activities also emphasized personal strengths and increased feelings of resolve. As a consequence, most survivors experience post-traumatic growth, reflected in enhanced psychological well-being, deeper appreciation for life and more meaningful relationships.

The personal growth and peer-to-peer activities focused on building secure relationships between survivors and the four main factors promoting resilience: developing social support, attributing meaning to the experience, regulating emotions and learning successful coping skills. Importantly, the program created a transitional community to promote resilience so that survivors could apply these principles to themselves in addressing the consequences of war-related violence.

Immediately after a traumatic event, survivors are likely to experience a crisis of meaning. The participants learned that survivors tell their stories to give form to this painful experience, to gain a sense of direction and hope, and to increase their momentum toward post-traumatic growth. The Out of the Ashes activity began by asking participants to write down or draw on paper a crisis event that they experienced. Then they burned the slip of paper and rolled the ashes in a piece of modeling clay. Using what they have learned and discovered in dealing with their crisis so far, the survivor then molded a symbol of hope from the ashes and the clay. At the workshop, all the participants moved from table to table to view each other’s artwork and to hear, not about the traumatic event, but about the person’s future hopes.

At least temporarily, trauma robs survivors of their dreams for the future. By using a resilience-focused approach, peer-support workers practiced ways to help other survivors envision new life possibilities. By drawing attention to these instances of dealing with challenges, survivors are given opportunities to discover unknown strengths, appreciate unrecognized resources and achieve a sense of hope. Workshop participants learned that landmine survivors not only tell their stories, but the themes that emerge from these stories shape their personal identity. In other words, the narratives that survivors create do more than organize their life experiences: They affirm fundamental beliefs, guide important decisions, and offer consolation and solace in times of tragedy. Peer-to-peer support can help other survivors transform their crisis narratives into survival stories. In the experiential activities, the participants practiced offering comments and questions to facilitate a successful resolution to a particular crisis. The resilience lens served as a reminder to look for strengths, rather than focus on deficits, when working with landmine survivors. Participants also heard about the impact of trauma on the brain and how emotional regulation is disrupted after a trauma. Using experiential and playful activities, participants practiced ways to help survivors reduce their distress, soothe themselves when upset and enhance positive feelings of resolve.

Exploring dimensions of resilience, building secure relationships and developing a transitional community was further facilitated by the survivors’ participation in a series of experiential, expressive exercises (original movement, voice and story activities). These creative activities provided an opportunity for survivors to join in the production and performance of a play. The dramatic and theatrical presentation originated from survivor stories. (Ghannam S. Ghannam, playwright and actor, conducted this portion of the workshop based on a curriculum he developed entitled “The Seven Mirrors.”)

Trauma is a time of intense emotions, but a common assumption is that individuals in crisis have only negative feelings, such as fear, shock and grief. Participants were informed about recent research that demonstrated survivors actually experience not only painful crisis reactions but also feelings of resolve. These feelings include courage, compassion, hope, peace and joy. Acknowledging and giving expression to the gamut of emotions, both negative and positive, can promote a positive crisis resolution.

Group Project Development

Another group project also addressed leadership and teamwork skills. The participants were grouped by country and given the assignment of developing a plan for a project in their home country. The projects were to incorporate elements of emotional, psychological and practical support to survivors of landmine/unexploded ordnance injuries and/or their families. Participants were told that they may wish to work on matters related to health, education, mobility or accessibility, human rights, employment or income generation, sports, or other survivor issues. Staff and facilitators helped participants develop their project plans by considering the goals and objectives, logistics, funding, personnel, legal restrictions, and desired results. At the end of the week, the groups presented their ideas. Participants created projects related to rights, accessibility and sports programs in this useful learning exercise. The project sites were community-based and addressed survivors across the lifespan.

Follow-up surveys are polling participants on their use of the knowledge and skills they gained in the project-development exercise. The program created a blog and website where photos and comments can be posted to help preserve the relationships and connections.

Feedback from participants was overwhelmingly positive. One participant said about the workshop, “You cannot imagine how helpful this workshop is to get us beyond our crisis.”

More significantly, the majority of participants also reported their experience of post-traumatic growth. As a result of the workshop, 96 percent stated they had a greater feeling of self-reliance, 92 percent reported they had a greater sense of closeness to others and 88 percent discovered they were stronger than they thought.

In conclusion, P2R is a culturally-sensitive program that enhances the potential of landmine survivors for leadership in offering peer-to-peer support services to others. The attachment-grounded, resilience-focused and strength-based program can be easily adapted to other cultures. With this positive feedback, P2R plans to assist other countries and expand its use to additional victim assistance programs.

For additional information about the project, see http://cisr.jmu.edu/P2R/index.htm.

Acknowledgements

JMU’s CEIR would like to acknowledge the many persons behind the scenes that made P2R possible. First, thanks to Kamel Sa’adi for his vision to develop a therapeutic program for the psychological rehabilitation of landmine survivors. Thanks also to Ghannam S. Ghannam, whose theatrical and physical...
activities were an integral part of the program. Additionally, we extend a heartfelt thank you to the event facilitators, Adnan Al-Badri, Fouad Beainy, Daoud Faraj, Mohamad Fehmi, Colonel Kelly Fares and Lieutenant Colonel Mohamed El Charik for their facilitation and support of the event. Finally, much gratitude is owed to Lina A Khalifah Rassas, whose outstanding coordination and planning of the logistical aspects of the training were invaluable to its success.

Cameroon Macauley, MPH, joined CISR in August 2010 as Peer Support and Trauma Rehabilitation Specialist. He holds degrees in anthropology and psychology, and became a Physician Assistant in 1989. He has worked in refugee camps on the Thai-Cambodian border, at a district hospital in Sumatra, as a Peace Corps volunteer in Guinea-Bissau, in Mozambique where he taught trauma surgery for landmine injury cases, in an immunization program in Angola and in a malaria-control program in Brazil. Between 2005 and 2010, he taught mental health courses for Survivors Coop in Bioma and Hererogeme, Colombia, El Salvador, Ethiopia, Jordan and Vietnam.

Lennis Echterling, Ph.D., is Professor of Counseling Psychology at James Madison University. He has more than 30 years of experience in promoting resilience, particularly during crises and disasters. Since 2003, Echterling and Stewart have collaborated with students to provide play-based therapeutic services to the children of National Guard members deployed to Iraq and Afghanistan. They also helped implement grant-funded projects addressing psychosocial problems of landmines and unexploded ordnance in such countries as Cambodia, Jordan and Vietnam. Echterling has received the College Award for Distinguished Service, James Madison University’s Distinguished Faculty Award, Virginia Counselors Association’s Humanitarian and Caring Person Award, Outstanding Faculty Award from the State Council of Higher Education for Virginia, and the National Counseling Union and Innovation Award from the Association for Counselor Education and Supervision.

Nicole Neitzey is the Program Manager and Grants Officer for CISR, having worked at the Center since 2001. She graduated from James Madison University in 2003 with a Bachelor of Arts in technical and scientific communication, and an online publication specialization. While at CISR/MAC, she has worked in various capacities with the U.S. Journal of ERW and Mine Action and the Center’s websites and databases, as well as served as Project Manager for the Pathways to Resilience (Liberation) project, Study on U.S. Orphan Landmines, Consortium for Complex Operations Portal Review project and State Department CD-ROM project. She also assisted with the Big Bang Project, the Landmine Action Smartphone, and the Center’s Senior Manager’s Courses sponsored by the United Nations Development Programme and PA/VIRA.

Hasan Hamdan, Ph.D., graduated from Birzeit University in Palestine with a Bachelor of Science in mathematics in 1993. He graduated from American University with a master’s degree in mathematical statistics in 1996 and with a doctorate in statistics in 2000. After graduation, Hamdan joined the Department of Mathematics and Statistics at James Madison University. In 2003, he became a national NExT Fellow, a national career- development programme for new faculty in the mathematical sciences. He served in the Mathematical Association of America, MD-DC-VA Section as an officer for the 2007-2008 academic year, and became an International Statistical Institute elected member in 2007 and the recipient of the 2010 JMU Emeriti Association Annual Award. He is on a one-year sabbatical from JMU teaching at the Arab American University – Jenin in Palestine.
