CLUSTER 5

80535	GPSYC 101H	0001	GENERAL PSYCHOLOGY	8:00 AM - 9:15 AM	T T	MILLER 2160	3	ABRAHAMSON, C
-------	------------	------	--------------------	----------------------	-----	-------------	---	---------------

HONORS SEMINARS

90012	HON 200F	0001	ASTROBIOLOGY: Search for Life on Other Worlds	2:00 PM - 3:15 PM	T T	MILLER 1107	3	DAUGHTREY, T
-------	----------	------	---	----------------------	-----	-------------	---	--------------

Astrobiology is the scientific study of the origin, development, and distribution of life in the universe. This study brings together historically separate scientific fields such as microbiology, ecology, astronomy, geology, paleontology, and chemistry. It considers the most fundamental questions science can pose: What is life? Where and how would you look for life on other worlds? What would you do if you found life? These questions have been asked for generations, but only recently have we had the knowledge and the technology to address them from a scientific perspective. This course will provide a foundation to the quest for extraterrestrial life.

90015	HON 200G	0001	MULTICULTURAL AWARENESS	3:45 PM - 6:15 PM	T	HHS 1201	3	EVANS, K
-------	----------	------	-------------------------	----------------------	---	----------	---	----------

Critical Race Theory and Diaspora Studies ground this seminar. U.S. borders studies and post-colonial scholarship are, necessarily, integral and coalescing foundations of the course. Double consciousness, mobility, hybridity, revision, "third space," histories of coalition-building and transnational diasporic connections are aspects of the lectures, readings, films and presentations for consideration of race, class, and gender in America.

90016	HON 200Z	0001	HISTORY OF SLAVERY	12:20 PM - 1:35 PM	M W	ROOP G10	3	OPALA, J
-------	----------	------	--------------------	-----------------------	-----	----------	---	----------

In this seminar, students will read and discuss four recent studies of the history of New World slavery. These works cover every aspect of slave history from the European political and economic matrix of the Atlantic slave trade to the operation of the slave trade on the African coast, to the infamous Middle Passage to plantation slavery in the Americas to the distinctive contributions Africans made to New World civilization.

---------	------------	------------	-------	------	-----	------	----	------------

HONORS SEMINARS (Continued)

90017	HON 300H	0001	RESEARCH & INFORMATION	9:30 AM - 10:45 AM	T T	HHS 2202	3	HAWORTH, E
-------	----------	------	------------------------	--------------------	-----	----------	---	------------

This course is designed to instill sophisticated research skills in undergraduates while helping them to research a chosen topic for a senior thesis. Students will learn to use effectively a variety of print and electronic research tools. Emphasis will be given to concepts of information retrieval, structure and dissemination of information, and critical thinking topics such as evaluation and organization. **Restricted to juniors and seniors starting or currently working on their thesis projects only.**

90019	HON 300L	0001	INTERNATIONAL SCIENCE & TECHNOLOGY AFFAIRS	3:30 PM - 4:45 PM	T T	HHS 1208	3	IVORY, M
-------	----------	------	--	-------------------	-----	----------	---	----------

In today's world, citizens must come to grips with science and technology. The role of the U.S. in the world involves more than mere diplomacy. Increasingly, international affairs involve negotiations over complex scientific and technological issues, which must be integrated into more typical discussions of sovereignty, power, trade, and human rights. The course will discuss science, technology, the domestic political economy, and international relations in an integrated picture. It will cover the design of national science and technology policies and international cooperation in science affairs, including cases such as genetically modified foods, trade-related intellectual property rights, telecommunications censorship, and human reproductive rights.

90020	HON 300W	0001	A WOMEN'S COLLOQUIUM	5:15 PM - 7:45 PM	W	CHANDLER 131	3	EVANS, K
-------	----------	------	----------------------	-------------------	---	--------------	---	----------

The Colloquium examines contemporary women's issues in America, bringing attention to the experiences, contributions, and special concerns of women in many walks of life. The seminar is multidisciplinary, featuring presentations by class members and guest lecturers. Topics include Constitutional law, psychology, justice and sexuality, cultural values, health, the workforce, religion, reproductive rights, and the feminization of poverty.
