in cooperation with the
Federal Facilities Council of the National Academies
presents

2009 NRC/FFC & IIIA Homeland
Security Symposium
**“Protecting Large Facility
Complexes”**

Save the Date!!!

One day only! Limited space!

Wednesday, May 13, 2009
Washington DC Convention Center
Washington, DC

www.jmu.edu/iiia/2009symposium

Large facilities and facility complexes represent high-value targets and pose unique risk management challenges. Because such sites often perform critical functions, security programs must address multiple hazards spanning both physical and cyber dimensions.

To develop a better common perspective on large facility protection, foster community dialogue, and explore more effective security approaches, this event brings together facility executives and security experts to discuss large facility complex protection issues and solutions. Panels will address threats and preparedness measures including both technical and policy solutions. The agenda will also include selected major facility case studies representing successful security upgrade programs. Keynote speakers include Dr. Charles Steger, President, Virginia Tech, and Dr. Richard Besser, Acting Director, U.S. Centers for Disease Control and Prevention.

Participants will include leaders from academe, the Federal Facilities Council, Federal/State/Local government and private-sector security experts.
