

Problem Solving in Virtual Worlds

ANTH 395, THEA 390

Virtual worlds have made Earth a true global village. Inherent to these created spaces is the understanding that people come together with the intention to interact in a meaningful social manner. This creates a rich medium for problem-solving real world issues in a fun, cooperative way. Through the exploration of virtual worlds students will develop questions that they will study. Students will propose a hypothesis that they will then test through a project that they develop and ultimately evaluate in Second Life.

Tuesdays and Thursdays, 2:00-3:15
