11/15/23

Hello colleagues,

Thanksgiving break is rapidly approaching, and while we're all looking forward to some rest, campus activity isn't slowing down in the interim. Some of that commotion comes from ESPN Game Day's third JMU appearance; if you want to watch preparations from the comfort of your office, check out the QuadCam, which provides a 24/7 live view of the Quad. The rest of the university is matching Athletics' vibrant energy - our community is hustling! A great example of the depth and breadth of what we do can be found in the College of Education's partnership map which depicts the scope of CoE's impact across the Commonwealth. The energy required for that kind of reach is astonishing, and so are the ongoing achievements of your colleagues - take a peek at what they've been up to.

- Professor of Geoscience Education <u>Eric Pyle</u> and Professor of Geochemistry <u>Steve Baedke</u> were featured in a <u>WHSV segment</u> on a series of earthquakes centered in Augusta County. Pyle followed up with <u>WHSV</u>, elaborating on possible environmental factors. In addition to these local media appearances, Geology & Environmental Science faculty and students recently presented 34 papers and posters at the recent <u>Geological Society of America meeting</u> in Pittsburgh.
- Professor of Art History <u>Laura Katzman</u> reports that curating and displaying <u>"Ben Shahn, On Nonconformity / De la no conformidad"</u> at the Museo National Centro de Arte Reina Sofia has been an incredible experience so far. Using pieces from the <u>Madison Art Collection</u>, this is the first time MAC artworks have been lent to another facility. Drawing inspiration from the exhibit, a group of <u>JMU</u>
 <u>Dance</u> and <u>Music</u> students led by <u>Rubén Graciani</u>, Dean of the <u>College of Visual and Performing Arts</u>, recently performed at the museum during a <u>study abroad experience</u>.
- NPR's Health Shots showcased Associate Professor of Communication Sciences and Disorders and Audiology Program Director Erin Piker in the piece "Hearing Loss Can Lead to Deadly Falls, But Hearing Aids May Cut the Risk." The article details the underlying hearing issues experienced by older adults, and Piker provides specific insight into how reduced function in a system located in the inner ear can increase a patient's fall risk, because the vestibular system is fundamentally linked to balance. If you need to have your hearing tested, visit the JMU Audiology Clinic for assistance.

Please keep submitting your accomplishments, comments and inquiries. You can email provost@jmu.edu or submit a question anonymously through the Ask the Provost option online.

I wish you each a relaxing and rejuvenating break next week.

Sincerely, Heather

Heather J. Coltman, D.M.A. Provost and Senior Vice President of Academic Affairs James Madison University (540) 568-3429 She/Her/Hers
