

JMU Chemistry and Biochemistry Seminar

Saturday, February 10, 2018

1:30pm in Eng/Geo 2208

What can you be with a PhD?

Dr. Eric P. Chang

Chemistry and Physical Sciences

Pace University

New York, NY

Are you an undergraduate science major thinking about applying to graduate school? Are you wondering what life is like during and beyond grad school for PhD holders in science? Are you curious about possible career options outside academia and industry? If you answered yes to any of these questions then please join Dr. Eric P. Chang, an Assistant Professor of Biochemistry at Pace University, as he discusses his own career path and shares the stories of several of his close friends and colleagues working in areas such as pharmaceutical research, medical writing, science outreach, policy administration, and data science. This seminar will provide undergraduates a forum to learn and ask questions about various training and career opportunities for scientists. Faculty participation is highly encouraged to help promote a dynamic dialog between students and mentors on professional development.
