On Becoming Better Mentors and Advocates in STEM

Dr. Pamela Harris

Associate Professor of Mathematics & Faculty Fellow

Davis Center and the Office for Institutional Diversity, Equity and Inclusion

Williams College

In this talk, I discuss some of my past mentoring experiences and their effects on my self-confidence and my career progression. Based on these experiences I share concrete ideas on how to build better mentoring relationships. I also detail how becoming advocates for systemic and cultural changes in STEM fields provides another way to help create environments in which members of groups who have been historically underrepresented and underserved can thrive authentically in the STEM community.
