

# RESEARCH EXPERIENCE FOR UNDERGRADUATES

As a future business leader, you'll need to know how to gather and analyze data to help make the best possible decisions for your company.

Our Research Experience for Undergraduates (REU) program will help you learn the process of conducting independent research in the business disciplines.

As an undergraduate research assistant (RA), you'll work alongside a faculty mentor on an in-depth project, learning a wide range of research skills such as reviewing literature, developing surveys, collecting and cleaning data and analyzing results. At the same time, you'll make valuable connections with JMU faculty as you collaborate on research topics of mutual interest.

The REU program offers you an opportunity to build professional skills, gain new perspectives, refine research techniques or prepare yourself for graduate school.

Examples of past student-faculty collaborative work includes published research papers, live presentations at conferences and opportunities to combine your research with external participants.

If you are in good academic standing, apply for a fall, spring or summer paid position.
